

Meeting Agenda

Location: 4207

Date: 4th May 2011

Time: 14:29

Facilitator: Jennifer Panditha

Participants: Robert Kaufmann, Jennifer Panditha and Boel Nelson.

1. Objectives

What is done?

Who are responsible for the test classes?

Which use cases are we aiming to implement completely?

Our plans for completing the SDD

Presentation of the project

2. Reports

The draw class is almost done. There are few more components to draw for the US standard. Components for the IEC standard are fully implemented.

Use cases for connecting components, opening workspaces, saving all workspaces and saving active workspace are implemented.

Test classes are being implemented with the help of JUnit.

3. Discussion items

It is decided that all our use cases that are prioritized as high or medium are fully implemented by the end of this week.

Test classes are to be implemented in the next week after the implementation of the use cases so that we have enough time to implement all the use cases that we have intended to have in our application.

The SDD is to be revised during Wednesday the 11th of May.

During the next week, we will be planning our presentation of the project.

4. Outcomes and assignments

Boel and Jennifer: implement copy, cut and paste use cases

Jennifer: implement the remaining components to draw in the US standard

Robert: checks for errors in the updating method in the Model class

5. Wrap up

Our next meeting will be held on the 12th of May.
